NEW PRODUCTS

Trainum Cable:
Trainum developed Trainum (in Spanish: tren último) specifically designed with openings ranging from 0.25% in high traffic cables to 10% in low traffic cables to improve the electrical properties of the conductor and ensure continuous welding strength. The circuit is designed to keep a 15% to 30% of a 180° bend, ensuring the flexibility to meet the control panel's linear cable needs. Additional specifications include a 90% straight-line puzzle strip to withstand stress.

Linear Heat Detection Cable:
Trainum's P5 cable has been designed specifically for various temperature applications. The cable allows for the detection of changes in temperature, which is particularly useful in monitoring water temperatures at critical levels. Its waterproof insulation ensures that it remains operational in any environment, maintaining reliable performance in the control panel. This linear cable is ideal for applications that require minimal stress.

Steel/Alloy Instrumentation Cable:
Trainum's P2 insulated cables provide electrical connections within industrial and commercial environments, ensuring reliable performance in various situations. Its coaxial sleeve maintains insulation integrity, while its stainless-steel ferrule provides a high-quality finish, making it ideal for demanding environments.

Last Chance to Win JBL Speaker

Lottery on 20th August 2017

Province of Basketweave tickets on sale at: https://www.https://www.jblspeakerstickets.com

Achievement Program

Winning entry is announced on 20th August 2017. The entry will be selected at random from all those entered, with no process or selection criteria other than age, gender, or any other factor. All entries are encouraged to participate.

PARKING & CALIBRATION

Electric Car Supply Black Button

The new JBL Speaker System is designed for various car applications. This innovative product uses the innovative housing design, allowing the speaker's stereo buttons to rotate, ensuring that the buttons are easily accessible. This feature ensures that the buttons are visible and remain functional, even during heavy vehicle use. It is necessary to have good visibility to ensure proper handling of the vehicle, and these buttons provide the necessary information to operate the system effectively. This product is ideal for heated or unheated vehicles, offering a comfortable experience for drivers and passengers alike.

CAR ACTIVITIES

Fighting back will be 5000 club children every Sunday.

Training Programs

Personal training on 13:3:3 "Focus" setup to help get the JBL speaker system up for the "I'm back" Training 2023. Workshop by Mr. Wang the 16th.
